

Your rescue plan:

0. Preparing your adventure.

Bring all your Lab 1-6 rewards that you have collected so far. These are clues and helper items to find the final location where the Captain Bird is being hold.

Select one student from your lab group to go to Location 1 and 2 in the university to collect more clues – let's call this *student X*. Student X will communicate the clues they find to the rest of the team in the lab, to be used in some tasks that may involve programming.

Student X can use the log page for recording the clues:

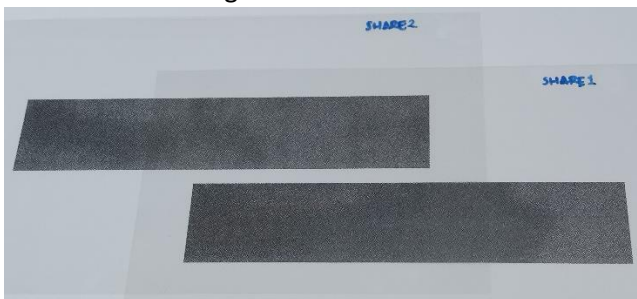

1. Discovering Location 1.

Complete Task 1 in the lab.

Once your team complete it, TA will give the password to accessing the next task, Task 2, and the second share **Share 2**.

Combine Share 1 and Share 2 to obtain a secret message containing Location 1.

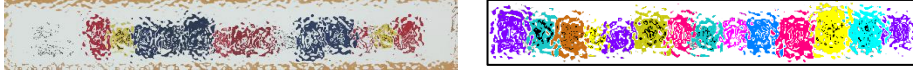

Send Student X to go to Location 1.

At Location 1, find a secret key K1 written on a small poster.

2. Discovering Location 2.

In Task 2, you and your team are supposed to write an algorithm A2 that can decipher a secret message in Java. The secret message was given to you in a piece of paper in a previous lab:

The decipher algorithm A2 will take both the secret message above and the secret key K1 to obtain a plaintext containing Location 2.

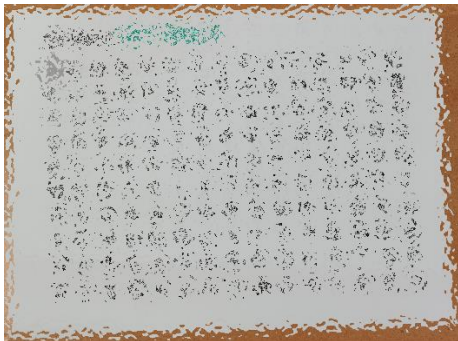

Student X can then go to Location 2.

At Location 2, find a secret instruction SI2, written on a small poster.

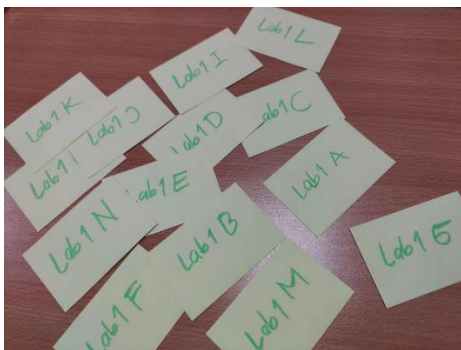

3. Going with your team to Location 3 – Final Location.

Student X should take a picture of secret instruction SI2 and go back to their lab room (SD554/SD546/SD446E), to join their lab team.

Use the secret instruction SI2 to find Location 3, hidden at the puzzle given to your team before:

Go to Location 3 with all your team members, show your Lab Ticket containing Entry Password that has been given to you in the previous labs (by your Lab TA) to the NPC guarding the door.

The NPC will take a picture with you, your team, and the grateful Captain Bird that you have just rescued.

The teams who manage to complete first, second, and third will receive a small token of appreciations from us.

All lab participants will receive the *same* CW2 marks for participation.

Note that some teams will be interviewed for your participation in this event.

Academic Integrity Code:

If you belong to the earlier lab sessions, please ***do not leak any information*** to the next labs – and ruin their fun and surprises!

Remember, you will get your full marks simply by participating, there is *no points* in cheating.

Any cheating attempt in this assessment will be treated as academic integrity violation.

Thank you so much for your cooperation! 🙌🙌🙌

CPT111 Teaching Team.
